The pace and extent of the reduction in unemployment and underemployment plus the progress of inflation back to the RBA's 2-3% target band are key for when the RBA begins to normalise Australian interest rates. This is unlikely to be this year unless unemployment begins to fall sharply soon.

RBA Deputy-Governor confirms discussion of neutral rate was of no significance to current monetary policy decision. What is significant is that (i) the RBA's view of the economy continues to shift more favourably; and (ii) from a longer-term perspective, the current 1.5% cash rate is 200bps below the RBA's view of neutral.

This week's key events include: (i) Fed meeting (no change in rates expected); (ii) Q2 CPI (core inflation expected to have bottomed at around 0.4/0.5% q/q); and (iii) RBA Governor's speech on "The Labour Market and Monetary Policy:" which is likely to underline the importance of a reduction in unemployment and underemployment for the normalisation of Australian interest rates. A good guide post may be when the unemployment rates is at 5.25% headed towards 5.0%, however inroads into underemployment are also likely to be important given this measure has been more elevated relative to unemployment in this cycle.

The Labour Market and Monetary Policy

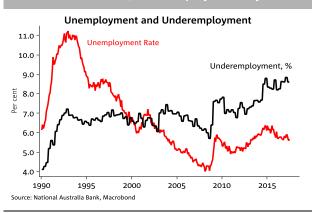

RBA Governor Phil Lowe speaks on Wednesday at the NAB-ABE-Anika Foundation lunch on "The Labour Market and Monetary Policy". The speech will likely offer further clues that will help inform the market about the likely course of Australian short-term interest rates after a volatile week at the short end of Australian interest rate markets. In this weekly, we review our thinking on the importance of recent developments and comments by the Bank.

The release of the July Board Minutes last Tuesday set the monetary policy hares running for an earlier-than-expected rate hike, largely as a result of the Board's discussion of the neutral rate being 1% real in Australia (or 3.5% nominal). This was read as possibly signalling a change in monetary policy intentions by the RBA, although a subsequent speech by Deputy Governor Debelle revealed that the discussion had no significance to the current monetary policy decision, but was simply one of a number of regular deep-dives undertaken by the Board on medium-term issues relevant to the setting of policy.

That said, the Minutes again reveal a more positive outlook by the RBA on the economy, suggesting the monetary policy pendulum continues to shift away from further easing and toward the next move in rates being upward.

Chart of the week: Un/underemployment key

Ivan Colhoun, Chief Economist, Market

The Deputy-Governor also provided a number of other important inputs into the monetary policy discussion noting that: (i) Australia did not have to automatically follow foreign central banks in tightening interest rates because the RBA had not taken interest rates as low as foreign central banks in the aftermath of the Global Financial Crisis; and (ii) Australian monetary policy is primarily focused on domestic policy requirements, though elsewhere the Deputy Governor did note that currency developments had played a role in Australian economic and policy developments.

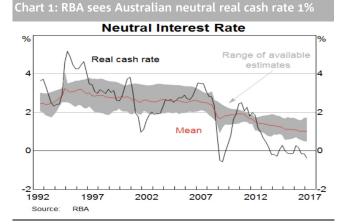

Thinking about the domestic policy priorities of the Bank and the current stance of policy should give some important guidelines as to how Australian monetary policy may evolve. The domestic policy priorities are clearly: (i) to return inflation to the RBA's 2-3% inflation target across time; (ii) to reduce unemployment and underemployment (something that can arguably receive "greater focus" while inflation is below target); and (iii) to ensure that policy settings do not contribute to medium-term distortions or a build-up in financial risks, though macro-prudential policy has of course been used to complement monetary policy in this regard given the overall requirement for looser Australian policy.

This week's Q2 CPI is likely to support the view that core inflation in Australia has bottomed at around the 0.4/0.5% q/q rate, which will be pleasing for the RBA.These core rates may well rise a little in coming quarters given sharply higher energy prices from Q3. However, a sustainable rise in wages and therefore core inflation is likely to require a reduction in unemployment and more importantly in underemployment as the latter has been elevated relative to unemployment in this cycle (see Chart of the Week on the front page).

NAB suspects that the pace and extent of reduction in unemployment and underemployment will likely prove important in assessing when the RBA will begin to remove monetary policy accommodation. As reported in a recent AMW, IMF Research found that underemployment had accounted for much of the moderation in wages growth in this cycle]. Last week's employment data reports employment growth of around 26,000 per month in trend terms. If sustained, this should be sufficient to reduce the unemployment rate across time, especially if population ageing reduces the participation rate a little each year as we suspect.

The degree of accommodation is also a relevant consideration. As inflation moves back towards target and underemployment falls, the RBA, like other central banks, will want to shift interest rates back to a more neutral setting. The July Minutes provided the information that the RBA currently sees policy around 2% accommodative (being the difference between the Bank's nominated 3.5% neutral nominal cash rate and the current 1.5% cash rate). [NAB would see the neutral rate a little lower than this and therefore assess policy as a little less accommodative, but acknowledges that these estimates are not precise] (see Chart 1).

Two important conclusions then: (i) it seems increasingly likely that the next move in interest rates will be an increase; (ii) the pace and extent of the reduction in unemployment and underemployment – along with the progress of core inflation back in to the 2-3% target band – are likely to be key in assessing when the RBA will

begin to normalise Australian interest rates. This seems most unlikely to be this year unless the unemployment rate begins to fall sharply soon and clear signs wages growth has bottomed.

Week ahead: CPI, Lowe speaks, Fed meets, US and UK GDP

There's yet more RBA focus this week with Governor Lowe speaking on the labour market and monetary policy on Wednesday at the NAB-ABE-Anika Foundation lunch in Sydney. Very policy relevant. Australia's Q2 CPI is also due on Wednesday.

The CPI is expected to be close to both last quarter's year-to readings and also within close sight of the RBA's May Statement on Monetary Policy forecasts. NAB estimates headline inflation of 0.4%/2.1%, the same as market expectations, with core inflation expected to print at 0.5% q/q/1.6% y/y, again right in line with the consensus and the RBA's May forecast of 1.75%.

Holding back headline inflation has been a 2.6% decline in automotive fuel prices, still subdued growth in rents (though these are higher than previous quarters which reduces the risk of a downside core surprise), flat to declining Recreation and Culture prices with cuts to audio visual, computing, and domestic holiday travel. Against those drags, Food prices are expected to have risen 0.8% overall, fruit and vegetable prices sharply higher on the back of lower post-Cyclone Debbie supplies.

Second on Wednesday is the speech from RBA Governor Lowe, speaking on "The Labour Market and Monetary Policy" at the NAB-ABE-Anika Foundation lunch in Sydney. This is presumably another opportunity to draw out the RBA's assessment of how much slack there is in the labour market and hence the medium-term outlook for policy, wages and inflation.

Offshore, the US and UK both release first looks at Q2 GDP. While the FOMC is almost certain to leave rates on hold, there is going to be interest in whether the post-meeting statement makes explicit that the beginning of the normalisation of the balance sheet is expected to be "relatively soon" (the phrase Fed Chair Yellen used at here press conference) or even "soon" as opposed to "this year", the phrase in the formal June Statement. This will not only indicate likely timing (at the 20 September meeting) but also the Fed's reading of the economy's progress and outlook. Its summary of inflation and characterisation of its medium term outlook will also be important aspects to follow.
