

NAB Monthly Data Insights November 2024

NAB Economics

Key Points

- **Consumer spending**, according to NAB's transaction data, went down 0.2% in November after a strong increase last month.
- The Black Friday sales season seems to have started earlier this year which may have brought forward some of the consumer purchases to October. **Retail** spending continued to increase, up 0.3% in November after a strong increase of 1.8% last month.
- **Non-discretionary spending** showed no change in November. Meanwhile, **discretionary spending** decreased 0.3%, which was led by a decrease of 0.5% in spending on household goods and department stores as well as a fall of 1.6% in other spending.
- Overall, consumer spending increased 1.2% in 3-month average terms and 4.5% over the past 12 months.
- **Business credits** increased 0.5% m/m in November after a large decrease of 1.5% last month. Overall, business credits increased by 4.5% over the past 12 months, or 5.3% excluding mining and agriculture.

Monthly Consumer Spending

- Total spending decreased 0.2% m/m. Overall, total consumer spending increased 1.2% in 3-month average terms and 4.5% over the past 12 months.
- Retail spending went up 0.3% after a strong increase of 1.8% last month, with an increase of 0.4% in goods retail and broadly unchanged spending on cafes & restaurants. For detail on retail spending, see [page 3](#).
- Spending on vehicles & fuel and essential services was largely the same as last month. while other spending went down 1.6% (see [page 4](#)).
- Total spending on goods increased 0.3% and spending on services declined 0.8%. Discretionary spending decreased 0.3% while non-discretionary spending remained unchanged.

About this report

NAB publishes aggregated customer transaction data with the view to providing real-time insights into economic activity in Australia. NAB takes data privacy very seriously. All customer transaction data has been aggregated and no individual's data is specifically identified or analysed as part of this process. The underlying data used in this report are not sold or made publicly available. This monthly report replaced the fortnightly *Data Insights* report and the monthly *NAB Cashless Retail Sales Index*, which were discontinued in October 2022.

Consumer Spending Methodology

Data on consumer spending are derived from NAB electronic transactions data, encompassing more than 4 million transactions per day. The data include transactions made by EFTPOS, Credit Card, BPAY, Bank Transfers, Direct Debits and Paypal services where available, and include transactions with Australian and international merchants. Spending includes both online and offline transactions. The data excludes cash withdrawals made during a purchase and purchases made offline in an overseas location. As the data only capture electronic transactions, results can be affected by changes in the take-up rate of electronic payment methods relative to cash. State splits of spending are based on where the customer lives, which may or may not be where the actual spending activity occurs. Customers without an Australian residential address are excluded. Transactions attributable to non-consumer sectors including Manufacturing, Mining, and Wholesale are excluded, as are Financial & Insurance Services transactions and Public Administration transactions (largely tax payments). Gambling spending and rental and mortgage payments are also excluded. Opportunities to expand coverage to include spending in these areas will be explored in the future. Individual industry and state series are seasonally adjusted using the X-11 method.

Business Inward Credits Methodology

Data on business inward credits are derived from credits paid into the accounts of NAB business banking customers, and are intended to approximate business revenues. Data do not account for business expenses and therefore are not reflective of profits or margins. Credits related to financing arrangements and capital raising are excluded where possible. Industry growth rates can also be affected by significant changes in the composition of NAB's business banking customer base. Businesses in the Financial & Insurance Services sector and Public Administration & Safety are excluded. Individual industry series are seasonally adjusted using the X-11 method and a three-month moving average is used to smooth volatility related to the timing of payments made to businesses. History for these series are limited and as such seasonal variation remains difficult to capture accurately. Opportunities to extend the available history to improve analysis will be explored in the future.
